CARL RADEK.

LV.....No speech.

SV.... A frameup, a fake? Extremely improbable. The trial of the British and Russian engineers which I attended in 1935 was certainly no frameup, no fake. The men at the trial had confessed a conspiracy against the head of the state. Such conspiracy groups have existed in Soviet Russia, like cancer cells, ever since Trotsky was expelled from the country.

SCU...The suggestion that the conditions were induced and upheld by some mysterious drug imported from Tibet is wildly nonsensical. This drug story was invented many years ago by a handful of Russian refugees. It was picked- dug up again in New York and repeated, demolished and discredited during the Metro-Vickers trial. It surely must be a remarkable drug which could compell Carl Radek to make in open court a for sardonic jests on his approaching fate.

GU....No, not drugs! What I think induced the prisoners to confess was primarily the mass of incriminating evidence prepared and marshalled and presented to them in great detail by the cunning and relentless investigators of the GPU. I am sorry in particular for Carl Radek who was forgiven once before for deviating from the party line.

SV... I am sorry in particular for Radek who has been forgiven once before for deviating from the party line. He is one of the most brilliant men I have ever met, and he is and a..... who is a skilful exponent of Soviet prepeganda. It is interesting to recall that Radek told me personally in 1935.

SV...It is interesting to recall that Radek himself told me in 1935 that German secret agents were involved in the notorious murder earlier in the year of Stalin's friend. Radek is something of an unusual.....and that peculiarity may have led to his downfall. One hopes that the merciful- Kremlin w mercy. In this case, at all events.
