

WASHINGTON - A NEW TYPE OF AIRPLANE IS DEMONSTRATED - THE AIRWING
ALL OF IT LIFTING SURFACE IS JET PROPELLED.

Box - 11895

A new type of all-wing airplane is shown in model form. Inventor
Eric Langlands calls it the "Airwing" and it is jet propelled.
Smoke shows how air goes in at the front is heated and compressed
inside and is hot out for jet propulsion. The model shows how
the "Airwing" would fly. All of it is lifting surface - another
example of the increasing attention that is being drawn and given
to the all-wing principle of airplane design.

ROTA TO HEART. UNIVERSAL & PARAMOUNT.
