

BARGES ROLL OFF THE BELT.

~~the fabricator.~~

The fabricator ~~make~~ *concrete barges,*
~~Factory built barges are now put up as easy as houses,~~
built as easily as houses,
~~is made to bow in home waters, as a result~~
~~of a new~~

Concrete panels, no more than 2" thick, are made by women in a factory several miles from the berths. The concrete is thrice as strong as usual, because it matures on a vibrating table. Little skilled labour is needed in the factory, and the assembly job is done by builders' men and not shipyard workers. For carrying on all the safer sea-routes the concrete barge replaces its steel cousin.

BARGES ROLL
OFF THE DELT

Factory built barges are now put up as easy as houses, in fact a number of building contractors produce both. Concrete panels, no more than 2" thick, are made by women in a factory several miles from the berths. ~~There~~ The concrete, ^{is} thrice as strong as usual, ^{from it} matures on a vibrating table. Hardly any skilled labour is needed in the factory, and the assembly job is done by builders men, and not shipyard workers. For carrying on all the safer sea routes the concrete barge replaces its steel cousin. ~~From the point of view of looks they're no disgrace to the large family~~
