

105 mm. Howitzer. Loading and wiring up takes some minutes but all sixty rockets can be fired at one press of the button or singly. Against a concentration of troops or enemy vehicles the deadly effect of the Wurlitzer is easily imagined.

60-ROCKET TANK GOES INTO ACTION.

Meet the mighty Wurlitzer, Tommy's name for the new rocket tank. It consists of a rocket apparatus ~~super-structure~~, easily detached from the tank, and containing sixty 4.5 tubes, each equalling the fire power of a 105mm. Howitzer. Loading and wiring up ~~uh~~ takes some minutes but all sixty rockets can be fired at one press of the button or singly. Against a concentration of troops or enemy vehicles the deadly effect of the Wurlitzer is easily imagined.
