WORLD'S BIGGEST BOMB

The world's finest bombers, carrying the world's biggest bomb, smashed the viaduct at Bielefeld, vital railway connection between the Ruhr and the rest of Germany. To take ~~through~~ the 22,000 pound bomb, known as ten-ton-Tess to the *RAAF*

~~men who make it~~, the Lancaster's had to be modified, but were substantially the same aircraft with which bomber command has pounded Germany by day and night. After direct hits and near misses by 12,000 pounders the new ten-tonners burst right on the spot.

The 22,000 pounders, ~~bursting for centimeters~~, tore a hundred yard gap in the viaduct - ~~and~~ an all-round triumph for bomber command.
