

BIGGEST BOMBER GOES UP

fort
The super-super flying ~~blummm~~ came through all tests with flying colours. Production of one hundred ordered by the U.S. army was signalled to go full ahead. The six-engined sky-monster could carry the latest atmm bomb from America to any part of the world; a challenge to the common sense of mankind to stop playing the power politics which always end in the same thing: war. Meanwhile, a thing of beauty, the B-36 is a triumph of aviation engineering.

1. TITLE: THE B-36! ARMY ORDERS 100 OF WORLD'S BIGGEST BOMBERS

2. In Fort Worth, Texas the B-36, the world's largest bomber, goes into mass production! An assembly line for gargantuas! The Army Air Forces have ordered a hundred of these six-engined planes, whose bomb-bays have space equal to four railroad freight cars. Their wing tanks carry 21,000 gallons of gasoline, enough to take an automobile sixteen times around the world, and then tour the forty-eight states! Their gross weight?

One-hundred-and-thirty-nine tons!

3. The world's biggest, mass-produced bomber, the B-36! New backbone for the Army air force?
