

FLASHES

New-type Constellations now in air-line service feature the cargo canoe, a new device to speed up airfreight. Like a streamlined boat fitting the plane, it adds four-hundred cubic feet of cargo space and raises by four tons the airliner's pay-load. Loading-time is cut in half, as the canoe can be attached in two minutes. Being well streamlined it only slightly decreased the speed. Cost, time and efficiency of air-travel are all improved by the cargo canoe.

A condemned man returned from Devil's Island. Soon after dawn the released convict, Sez nec, white-haired and haggard, was embraced by his daughter. He had returned to his home in Brittany after twenty years in the world's worst prison. Everyone in the little town of Ploudalmézean came to greet him as he saw his grandchildren for the first time. Sez nec was convicted of murder in nineteen twenty-three. As there was some doubt the death sentence was commuted. ² *Life imprisonment* At the house of Judge Hervé, who defended him at the trial, the returned prisoner was warmly greeted. The judge always believed him innocent of the murder of Councillor Quémener, seen in this picture, and wishes to reopen the case, to vindicate his ^{old} client.

1. TITLE: CARGO CANOE SPEEDS UP AIR FREIGHT!
2. Miami, Florida---New type constellations now in airline service feature the "Cargo-Canoe", a revolutionary, new device for speeding air freight. Resembling a stream-lined boat that fits snugly beneath the plane, it has four-hundred cubic feet of unobstructed space and adds four tons of payload capacity to the big airliners. The time formerly required to handle baggage and cargo will be cut in half, for this "Speedpak" may be attached or detached from the plane's fuselage in two minutes.
15. In flight the highly streamlined canoe offers so little drag that it hardly affects the speed of the plane. The new Constellations, the most powerful airliners now in service, bring a fresh development to air transport, the efficient time-saving "Cargo-Canoe"!
