1. TITLE: JET POWER HITS THE ROAD

2. Introducing the newest thing for bicycles, jet propulsion!

In Dayton, Ohio, Scoville Knox, at left, and Charles Marks add a modern twist to the common bike. Three miniature jets are mounted above the rear wheel, a gas tank beneath the seat. The jets are small, but powerful; yet their exhaust will not even damage a handkerchief held at close range.

Easily started by a tire pump and spark coil, the engines require no oil. Out on the road they gave the bike a cruising speed up to 35 miles per hour. Jet power hits the highway and makes pedaling pushing passé!

GERMANS

JET PROPELLED BICYCLE

Dayton, Ohio

Title in the clear
