

RADIO PHONE TAXIS SAVE TIME & TEMPER

A Cambridge taxi-cab firm has been allotted a radio wavelength, has installed a transmitter, and from its aerial and control room directs its ~~taxis~~ ^{drivers} while they are out on duty. People wanting a cab telephone the office. The ~~cab~~ ^{man} whose last reported position is nearest the customer is sent on the job. ~~On~~ ^Y setting down his fare every driver tells the office where he is and awaits instructions. Each cab is equipped with the famous Army Nineteen Set, used in the war for tanks ~~and~~ ^{unicas}. It cost the company a hundred and twenty five pounds for each taxi, but by cutting out cruising the weekly petrol bill has dropped twenty per cent, so the Army Nineteen soon earns its keep. For the public it is a ~~much~~ quicker and surer way of getting a taxi, ~~than anything tried before.~~
