

JET HELICOPTER IS BEST YET

Apply jet-turbines to helicopters and you really have something, but don't go up in one just after a heavy meal.

This latest wonder carries a pilot and two passengers, or pilot with a quarter-ton freight. It's undoubtedly the fastest climbing helicopter and the fastest traveller, though the forward speed is still secret. ~~Little wonder the demonstration amazed air attaches.~~ *Air Attaches amazed.* Highlight of the show — landing on a military lorry. This really is door to door flight.

Paris leads Europe by opening the first ^{big} helicopter station, practically in the centre of the city. ^{town} May British soon follow the example. All the advantages of helicopters are thrown away if you have to travel miles to an aerodrome. The Paris station incorporates the latest car-wash. Curtained off rather like your own shower-bath the car really gets the treatment. Just as well to close the windows beforehand. You drive to the station and when you return from the helicopter journey the car's waiting, ~~minutes~~ ^{minutes} spick an span. Drying is by hot air. ~~If you stay in during the wash don't come out till it's all over.~~
