

CALIFORNIA: SKYROCKET FLIES 1327 M.P.H.

Test Pilot Scott Crossfield had the distinction of flying Skyrocket in man's latest quest for super-speed.

Muroc
At ~~Muroc~~^{Muroc}, California, the research plane was attached to a B-29. At 32,000-feet a small chase plane alongside checked the priming of the rocket engine. 6-miles above the surface of the earth the great bomber released Skyrocket. In the next 3-minutes, consuming 3-tons of fuel, the research craft flew at 1,327-miles-per-hour - twice the speed of sound. A truly breathtaking achievement.

film is enlarged of the ~~single camera~~ shot by ~~the~~ used in the flight.

63

(landing) There's a big gap between experiment and flying in general. But London-New York in two-and-a-quarter-hours may not be far off.
