

## TV UNDERWATER CAMERA

Water-tight casing was lowered on to a television camera at ~~Malta~~ Malta for a test before <sup>it's</sup> ~~being~~ used <sup>in</sup> ~~as~~ salvage operations on the Comet, sunk off Elba. This is one of the newest scientific ways of locating objects on the sea bed. A TV camera was used to examine the sunken submarine Affray, and though the Comet lies in twice that depth of water, the camera may do the trick again <sup>and</sup> ~~and~~ <sup>the vessel</sup> ~~the~~ screen aboard ~~the~~ Sea Salvor may soon be helping the divers. The special camera was in perfect order.
