

NEW SUB MAKES NAVAL HISTORY

Why history? Because as long as she has fuel Explorer need never come up for air. The hydrogen-peroxide fuel releases all the oxygen the crew need for breathing, and as no snort-tube is necessary Explorer can cruise at any depth, ~~not just the length of the snort beneath the surface.~~ *The exception of streamlining of hull makes* ^{ps}
Underwater speed ~~will~~ exceed 30 knots; and all without any trace on the sea above. She was well and truly named *by* ~~the~~ Lady Reid Young. *Shd* ~~But~~ the navy commanders all the hydrogen-peroxide our chemical blondes will have more than just a dark parting.
