

ST. LAWRENCE SEAWAY UNDER WAY

5 The St. Lawrence River is submitting to ~~man~~ control by man.

At Cornwall, Ontario, in below-zero weather, began work on the dam, planned between the Canadian shore and Barnhart Island on the American side. ↑

power-stations here will benefit both countries, driven

30 by waters impounded by the dam, 20 feet above the present level

~~level~~. Thick ice coating steel structure-members made

40 it gruelling work, with a seven mile-an-hour current not helping.

50 Not only will millions of horse-power result from all this, but the St Lawrence Seaway will take ~~large~~ ^{large} ~~man~~ ships ~~submarine~~ right up to the

Great Lakes - a boon to international trade.
