

Hampshire--- Introducing Britain's newest pocket-sized plane- the Midge- (prototype of the Gnat) the world's first light jet-fighter at Chilbolton experimental airfield- before making a test flight. /

~~When at home,~~ The Midge- despite the low power of its engines, can fly ^{at} over 600 miles an hour; ~~and~~ ^{IT'S} purely a development aircraft and carries no armament. /

Produced privately, the plane ^{is the creation of} ~~was designed by~~ the designer of the Canberra Jet-Bomber. /

Although only half the size, and one third the weight of the standard fighter, the Midge is highly ^{manoeuvrable} ~~manoeuvrable~~ and easy and cheap to build, and simple to fly. It will appear at the forthcoming Air Show at Farnborough. /

On the other side of the Atlantic- a weird new land vehicle makes its ungainly debut at Indianapolis.

Called the "Rhino"- it is virtually "untippable", and though it weighs five tons- its massive hollow wheels make it amphibious.

It can deal with mud, ~~or~~ sand, ^{or} ~~just as easily as~~ small trees. A lumbering "go-anywhere" monster which is claimed to be the successor to slow-moving tanks. /
