

Chertsey: Modern Army Transport Show

1st October 54

say the experts. *(see the report)*
 Surrey: In modern warfare - an Army's advance depends upon the ability of its mechanised units to overcome all obstacles... So military ~~observers~~ ^{observers} from many lands came to the Fighting Vehicles Research Centre, at Chertsey - for a demonstration of the mechanised equipment of Britain's Armed Forces..

During the display, they saw how despatch riders and their machines stand up to the rigours of a shell-blasted road.

~~The~~ The lorry convoy ^{carrying} bringing urgent supplies is not beaten by a blown ~~bridge~~ ^{+ SO LONG AS THE DRIVER CAN FIND HIS WAY,} bridge. They just plough on - through the river ~~...~~

~~...~~ at station...

~~The~~ Britain (who first used the tank in World War One) - now produces an armoured surprise in peace-time. This is the world's first jet tank.

It is powered by a gas-turbine engine; but other details are top secret.

~~From~~ From Germany come pictures of the U.S. Army's atomic cannon going into action, during the recent Exercise "Battle Royal" ^{So stand by for} with an explosion that blots out the screen. SOUND.

And twenty miles away - the now-familiar mushroom cloud rises over the target area. Two batteries using atomic cannon are now serving with the N.A.T.O. Forces in Europe.
