

Hertfordshire: The growing interest in model aircraft ~~turning~~ turned the 12th All-Britain Rally, at Radlett Aerodrome, into a miniature "Farnborough". Nearly a thousand entries - ~~representing over one hundred clubs~~ - made it the biggest meeting of its kind in the world. The models ranged from giant gliders to tiny speed-models.

Some of them were radio-controlled; but this one seems to have the wrong circuit.

Oh Well! Back to the earliest form of launching - the assisted take-off. Once in flight, the radio-controlled models performed a full range of aerobatics....~~loop~~ loops, spiral dives, rolls, ^{yes, +} even a crash-landing.

The speed models are flown on wires - and speeds of up to 150 miles per hour have been reached - by this ^{ever-}growing circle of model plane enthusiasts.
