

The American space rocket "Vanguard" has gone up...in smoke. Their satellite launching hopes are temporarily grounded.

Yet, as we see the aluminium moon being prepared for what whould have the attempted been a triumphant entry into outer space... And watch the attempted launching at Cape Canaveral, Florida, from another angle - we should put it into its true perspective.

It is only two years since this non-military project was undertaken...

The Soviets used military rockets - perfected after at least ten years of research...

As the first and second stages of the Vanguard were engulfed in flame falling class - Saving and smoke - you can see the head continuing the delicate satellite)
