NEWSRIEFS:

The new flying boat MARS.....largest of its kind in the world.

The seventy-ton aircraft takes aboard a record cargo of nearly fourteen thousand pounds of mail and vital war material before setting out on a trans-~~atlantic~~ Pacific flight from California to Hawaii.

Body space is equivalent to a fourteen-room house. This is how you'll travel long distances after the war if you've got the desire, the money and the time.

Also on the big scale are the U.S. Army's new 240 millimeter guns. There's the inevitable artificial blitzkrieg as the column moves out to the proving grounds for final tests.

These guns can fire 360 lb shells a distance of over 15 miles - facts and figures calculated to impress,

Canadian Despatch riders make a final test-run before going overseas. Specially trained for service on any front, they take every obstacle at a bound.

Having half killed the poor blighters they say they're proficient - and the point is - they are.
