SUPERFORTS BOMB TOKYO

Superforts on Saipan.... A task force of B.29s. their noses point towards Japan, their shining bellies are filled with bombs for Tokyo....

North across the Pacific for fifteen hundred miles towards the heart of the enemy. Then - Tokyo - twenty thousand feet below.... The formations cruise deliberately amid the bursting flak.... making sure of military objectives before unloading.... The Nakajima aircraft plant is the main target.

At this height through heavy clouds, results are difficult to record, but you can see some of the bombs landing far below....The Japs had a much closer view....

But Japan doesn't take all this treatment lying down.... Back on Saipan, B.29s. blaze when the Japs hit back in a raid on the great base....One of the raiders is knocked spinning from the sky.

The Japs dealt a hard blow when they struck at this airfield....but in spite of it Tokyo has a lot more coming to it.
