P.T. FOR BABIES

From Hamburg, the most hopeful picture we have seen out of Germany for many months. The Neumann-Neurode health system resumes its work. Its object, to overcome infant deformity, rickets and spinal weakness.

Results are often amazing. Children unable to walk are toddling after a few brief weeks of training - others show remarkable resistance to disease. All are co-operative, and very happy.

Let us hope this may be the sign of a new and better generation of young Germans.
