

PHOTOS PATTERN DRESS WEAR

Your favourite snapshot can now become the pattern for your dress, as "Photons," (a process which develops photographs directly on to cloth) adds a new dimension to fabric fashions. The film of a rose is placed on an exposing drum. The picture of your boy-friend can be similarly used. On the drum, the film will be brought into contact with cloth sensitized by secret chemicals. Plain fabrics roll in. Light shining through the film prints the design - and this is the result. Miles of rayon, imprinted with a design of photographic detail, have been obtained from the single picture of a rose.

The first all-photographic fashion-show is held in New York. A rose pattern creation has its own built-in corrage.

This pearl-necklace design could be a jewel thief's nightmare.

If chess is your fancy, making a move on this should liven the game up a bit. And if you want to do away with mirrors, here's your dress. There is only one snag - what happens if the boy-friend wants to cut out a picture?
