

AND NOW THE FLYING CAR

Along a highway near Rome the Flying Car makes its first test, a propeller-driven automobile that also flies. Or (if you prefer it the other way) a 'plane that also doubles as a car. Top land speed - a hundred and fifty.

At the airport, Driver sprouts wings and becomes Pilot.

The wings unfold to a span of 12 yards, and - presto! - it's a 'plane.

The Flying Car has room for two passengers and develops 125 horse-power. Airspeed is over 200 miles-an-hour.

Italy's newest boon to travel is one step nearer to the submarine that climbs trees.
