

MACHINE AGE SOLVES BABY PROBLEM

The machine age finally gets around to the problem of what to do with baby when she starts to cry in the middle of the night. Don't get out of bed. Just turn on the "Night Nurse," a handy gadget invented by Dr. Sydney Beruch. With the click of a switch, a phonograph plays "Rock-a-bye Baby" and a self-rocker makes sure that little Judith gets well nixed.

This motorized crib is just what Judith wanted. It's more fun than a Coney Island roller coaster.

The soothing music of the "Night Nurse" puts baby asleep. There's one catch, however, it keeps Daddy awake.
