

THE WORLD IN CAMERACrawley

To the youngest of the new towns - Crawley - comes Princess Elizabeth to open the main road that will run through the industrial area. Closely-kept secret was the highway's name - Manor Royal - chosen by the Princess from an old tithe map of the district. Later, in "old" Crawley, the Princess plants a young maple-tree to commemorate the town's historic war-time association with the Canadian Army. Using a spade first used by Royalty 70 years ago, the Princess brings new life to an old corner of Sussex. All Crawley turns out to give a warm-hearted welcome to a gay Princess on her first public appearance of the year.

Hendon

The robot footballer makes its bow at the Arsenal's nursery ground at Hendon. Catapulting a ball at all angles, the tubular steel frame, invented by Arsenal's former goal-keeper Alec Wilson, is the "player" all Managers dream about.

To the up-and-coming Gunglers, the cannon-ball machine lays on a first-class service for practicing heading, trapping and ball control - in fact, all the elementary soccer arts, so frequently forgotten in the stress of a match. Other teams are planning to sign a robot star, too. Perhaps then we can have a robot international.

Colorado

From the world's highest observatory at Climax, Colorado, come dramatic new pictures of the sun's broiling surface. Astronomer Dr. Walter Roberts captures a solar eruption two hundred and fifty thousand miles away.

Pictures like this eruptive arch, which (expanding at 100 miles a second, may eventually become as large as the sun itself) give scientists a new angle on the mysteries of our universe.
