

FIREMEN FIGHT UNDERGROUND FIRE

Smoke billows once again near St. Pauls, as underground cables carrying thirty-two thousand volts catch fire. Streets are closed to all but fire-engines as London's firemen come to grips with the blaze. Through the grating they'll be able to crawl close to the seat of the fire. It's dangerous work, amid deadly fumes, and with blazing gas-mains nearby. Four manholes have already been blown off. Down below, there's an inch-by-inch crawl in single file, and they work in relays, for no man can stay long in the fumes and dense heat.
