NEWS IN FLASHES

New York has something new to talk about. It's the Hydrofin ... an English inventor's brainchild come to life for tests in New York Harbour. The boat, which rides on narrow, underwater skis, has her hull lifted out of the water by the action of tiny, leg-like wings in front of her bow. The Hydrofin passes her tests with flying colours. Now all they have to do is find a use for it.

America unveils the Matador pilotless bomber. Launched from mobile platforms, it flies under its own jet power once in the air.

With the tests a success, the first pilotless bomber Squadron in Air Force history is set up at Cocoa, Florida. The Matador can carry atomic warheads at supersonic speeds.

AMERICA UNVEILS

Back home, the air force unveils another kind of warning against aggression:
