NEW U.S. WEAPON

Front-line men in Korea thought up this new weapon. Howitzer shell-cases are filled with napalm, fitted with blasting-fuses and buried at danger spots where communists may try to sneak through. These are dummies, of course! The trap is wired up, and with everything set for the demonstration, the order is given to fire, and no-man's land becomes a sea of flame.

The flames trap the intruders and of course spotlight them for the defending rifles.
