

AIRPLANE INTO CAR

Over LaGuardia Airport, New York, cruises the Airphibian, a new plane with amazing versatility, as you'll soon see. So far, except for her four wheels, just an ordinary plane, but wait. First of all the wing section is removed - quite easily. Then the prop comes off, and the nose becomes a car - a convertible to take you into town. The same controls are used for flying and driving.

Down Broadway goes the airplane with a built-in taxi!
