MEMORIAL AT CLUNIE DAM

Just about a year ago as part of the Pitlochry power station Clunie Dam came into being, one of the key-points in the North of Scotland hydro-electric scheme. Since then, up its "fish ladder" more than 5,000 salmon have passed.

The memorial arch is in the form of a section of one of the great tunnels which link the lochs into the scheme. By the fish pass, a plaque to commemorate Sir Edward MacCollis unveiled by Lord Coeper so closely associated with man whose vision brought cheap power to the highlands and who died just before Clunie Dam was opened. So long as water flows over the Clunie Dam, they will remember Sir Edward MacColl.

RE/CW

Just about a year ago as part of the Pitlochry power station Glenisle Dam came into being, one of the key-points in the North of Scotland Hydro-electric scheme. Since then, up its fish pass, more than 5,000 salmon have passed. The mind that planned the use of the waters for man remembered those whose natural element they are. The memorial arch is in the form of a section of one of the great tunnels which link the locks into the scheme. By the fish pass, a plaque to commemorate Sir Edward MacCall is unveiled by Lord Gosper so closely associated with men whose vision brought cheap power to the highlands and who died just before Glenisle Dam was opened. So long as water flows over the Glenisle Dam, they will remember Sir Edward MacCall.
