

JET CAR RECORD

On the Jabbeke road near Ostend, the Rover Jet 1, the world's first turbo-jet car begins the last trial run before a real high-speed test.

She's only warming up: we're keeping pace with her all right, but wait till Spencer King opens her up ... and then it's Goodbye us!

Belgians knock off work to watch. This is going to be it - - a final check before the jet car establishes new records.

All set. The check control people are ready to do the official timing and certify any record she may set up. She's ready to begin her run up to the start - and there she goes!

Since this run she's topped 151 miles an hour. What's it like to drive this car of tomorrow - an all-British triumph in the motoring world? Let's ask Spencer King:

"It runs very smoothly. Hear just wind noise. No effort at all."
