JET NEWS

The latest challenger to the world's water speed record, held at the moment by America, is the new British jet-engined ski-boat, "Crusader," with John Cobb at the controls. The "Crusader's" got an engine similar to the "Comet" airliner's which will lift it onto its skis at high speed. Britain's latest jet-boat will be getting its first try-out at Loch Ness.

Lying outside Cowes, Isle of Wight, Britain's mammoth flying-boat, "The Princess," prepares to set out on her first taxiing trials. The crew's already aboard - and the ten prop-jet engines roar into action.

The huge aircraft taxis out into the Solent - and she's airborne! Nobody expected her to take-off so soon but the weather's just right for test-pilot Geoffrey Tysen, who's at the controls, and she's already touching 225 miles-an-hour.

On her first flight, the "Princess" covered 120 miles. According to her pilot she handles like a jet-fighter, despite the fact that she's bigger than the mighty Brabazon.
