

STOP!

Any traffic cop will tell you that the first thing every car needs is good BRAKES! "Exhibit A" with these men from the Hendon Police College is the newest brainwave in brakes - the Disc Brake. It's a large metal disc, vertical, and running with the wheel. Needs no adjustment, resists heat and water. After being tried out successfully in the B.R.M. these brakes will begin to be fitted to ordinary cars. Let's see if it WORKS!

Three wheels - two seats - $\frac{3}{4}$ horse power - $1\frac{1}{2}$ a mile. That's the nutshell story of Britain's newest baby car - the A.C. Petite.

At this private "little motor show" for Pathé, the new baby showed its fern. Up to now, this model has been doing its road tests disguised as a motorised invalid carriage, but by next Spring they'll be on the roads. So Look right, left - and underneath.
