FRENCH JET PLANES

Positive developed/ 140 meters = 470 ft
Exclusive ?

France is now building jet planes and by the efforts of her technicians and pilots has now completed the tests of two of the best jet fighters.

We have visited the DASSAULT plants now building these two types of jet fighter.

1- in MARIGNANE in southern France, the famous MYSTERE planes are being built, and immediately tested by France's best jet Pilotes.

The MYSTERE has a TAY jet of a pushing power of 2850 Kiles and is equipped with 2 30 m/m guns.

It already went through the Bound-wall for the first time in October last; when piloted by the American Pilote Johnston and many times since when piloted by french aces. Chief Pilote ROZANOFF is permanently testing all the Mysteres and has reached sound speed and over, many times; so has Captain CARPENTIER and other tests pilotes attached to Dassault plants.

This plane has been ordered for the American Air Force in the frame of off-shore orders.

2- In MERIGNAC, near Mont de Marsan, in the Landes, the OURAGAN, another interceptor fighter is now built in large number. It is equipped with NENE jet ~~engines~~ under permit from Rolls Royce but the ~~propellers~~ jets are built in France by Hispano, plants. The jets have a pushing power of 2,240 Kiles and the speed is 1000 Kms an hour. The plane is also equipped with 4 -20 m/m guns.

Our picture shows different phases of building of the OURAGANS in the Merignac Dassault plant, and then shots of wing flights of the same crafts.

Same for the MYSTERE built in Marignane.
