Lifboat with Subsidiary

A novel German construction is this lifboat with a motorised "subsidiary".

The "masterboat" is equipped with 3 engines - two of which are in operation for normal work - whilst the third one gives the boat superspeed in case of emergency.

The "offspring" is quickly put to sea by means of a pneumatic appliance. It is also equipped with a powerful engine and can "take it" in the roughest gale.

And after work is done, the little one is taken on board again ready for the next alert.
