

ALPINE AIRLIFT

Under the practiced hand of Captain Geiger, an aircraft takes off from a valley in the Swiss Alps. Its passenger is a skiing enthusiast en route for a ski-run more than 7,000 feet up. Flying over a group of fellow skiers, the aircraft comes in for a tricky landing.

Captain Geiger, a specialist in mountain flying, brings it safely down. Although it's a small aircraft, it's got enough room inside to take a set of skies as well.

The engine opens up, and away goes the aircraft for another load. Thanks to Captain Geiger and his Alpine Airlift, tourists can try their skill on the best possible ski-runs, high on the top of the Alps.
