

ROLLIGON ROLLS TO IT!

The American Army's new vehicle "The Rolligon" makes its debut at Stockton, California. Revolutionary tyres, like big balloons, enable the five ton truck to do just about anything. No wonder the Army snapped it up as soon as they saw it in action.

Remember, we said five tons! Inventor William Albee takes it all lying down.

The tyres, which measure three-and-a-half feet in diameter, can tackle any obstacle without fear of punctures. They're made of nylon and plastic, and need only a few pounds air pressure. Next time you feel like climbing up a wall, try the Rolligon! It'll do it for you.

X The first delivery of the sensational Rolligon is delivered to the Army Transportation Corps at Stockton, California. The spectacular vehicle, which can do just about anything, was developed and delivered in less than two months after the revolutionary tires were first demonstrated by their inventor.

X The Army is mighty happy about its new five-ten all-purpose machine.

X Inventor William Albee throws all caution to the winds.///Yes, we said five tens!

X The tires, three and a half feet in diameter, can pass over any obstacles, without punctures or traction problems. They're made of nylon and plastic, and take only a few pounds of air pressure.// Mr. Rolligon, you've ignored ditches, rode over logs, passed over rail road tracks, ran over people - but now, where's there to go?
