NEWS IN FLASHES.

NEW BEAVER PLANE.

The new De Havilland Beaver carries six passengers, fuel for a seven hundred mile hop and takes off in 400 feet.

Available with wheels, skis or floats she is ideal for casualty evacuation, supply dropping, aerial survey and a multitude of other specialised jobs. And down she comes - achieving a landing in 200 feet.

MODEL ENGINEER EXHIBITION.

London - and at the New Horticultural Hall Westminster, young engineers of the future look with envious eyes at the models on display.

Centre-piece was this colourful scale model of a Showman's Roundabout. Valued at a thousand pounds, it took nine years to make. And now all aboard!

Operated by the Society of Model and Experimental Engineers, the train runs the length of the Hall. And now it's time for another highlight. Radio-controlled models are a feature of the show and just to show what can be done - watch this one!

It's all scientifically explained but it looks awfully uncanny to us!
