HEAVING OFF CAPRI.

Into the blue waters off Capri goes the shape of things to come - at least for Professor Piccard. His latent bathysphere is ready for tests.

A globe seven feet in diameter is fastened under the cigar shaped fuselage. Pathe's cameraman rehearses too for future exclusive pictures. Built to resist a pressure of 132,000 lbs. per square inch, in it Professor Piccard hopes to descend to depths never yet reached by man. So off we go.

Should it reach 300 feet without springing a leak, then the Professor will try for a record two and a half miles down. By checking the release of special gasoline, the bathysphere can be stopped at any level. Metal ballast released by electro-magnets will bring him up again. So good luck for a brave venture.
