

ANNON

BARUCH-Fitzgerald

Army shows off "Amazon Annie", its biggest field artillery gun, which can fire an atomic shell. Despite its ponderous eighty-five tons, Amazon Annie rolls smoothly along over bridges built for less than half its weight. The immense bulk is distributed on two big transporters, so Amazon Annie can go over a bridge that can handle standard equipment.

- X Sharp turns aren't any problem, and on the straightaway the big gun travels at thirty-five miles an hour. A battalion of these giants will soon be sent to Europe.
- X Here are first pictures of the atomic cannon actually firing.
- X A mushroom ~~kind~~ of atomic smoke rises twenty miles away as America's new weapon speaks.
