GRAND PRIX CAR.

The new 2½ litre Gossnought racing car makes its debut at Goodwood. A stabilising fin rather like the one on Sir Malcolm Campbell's "Bluebird" is one of the main features of the car. A four-cylinder Alfa engine of 2,470 c.c.'s gives it its power. The Gossnought is designed for international races under the new Formula One rules.

Rodney Clark, the thirty-eight year old designer of the new car, takes it out for a trial run. Designed and built within twelve months, the Gossnought is believed to have cost about fifteen thousand pounds. It's hoped that speeds near the 200 mile an hour mark will be achieved. If tests prove successful, the Gossnought may be entered for the Italian Grand Prix in September.
