

RHINO

b-200201

Here comes a revolutionary new vehicle- the Rhino- a sight to shake the soul of even a truck driver.

The five ton Rhino was designed to travel anywhere on new type wheels that give it a grip on any surface. The wheels help it plow through underbrush like a tank although its engine is no more powerful than an automobile's.

Water doesn't stop the Rhino. Where it's shallow, the wheels do the work. In deeper water it can float propelled by a jet arrangement.

Its inventor hopes it will replace the Army tank.

The more the wheels sink the greater area they grip. So, churning along like a happy Rhinoceros - the revolutionary Rhino.
