

ATOMIC POWER PLANT

WEIST -- Aarseth

In a four thousand ton steel sphere -- twenty stories high -- America's first atomic electricity for commercial use is ready to course through transmission lines to homes and industries in northeastern New York State.

On a flag-draped stage, AEC chairman Strauss throws a switch illuminating, symbolically, the world's largest light bulb.

A steam generator -- powered by atomic energy -- sends out enough electricity to serve a city of thirty thousand persons. Put right to work by the first family on the line, hamburgers -- from an atomic electric stove -- are tasty testimonials of things to come in the atomic age!
