### UNDERGROUND AUTO PARKING IN MILAN

The traffic problem has found its way out in Milan by a first large underground auto parking called "autosilo" which can hold 500 auto and shunt 250 auto per hour.

It works this way: the auto is driven to one of the eight automatic gates at the entrance saloon. When the elevator is present, the door opens automatically, and the auto is carried over by a lifter called "dolly". Then by vertical and horizontal displacements, the auto is placed in its appointed box.
