

INVENTIONS

The hygienist Lorenzo Pizzuti had remarked how defectively works the washing system of the barmen; the drinker-traces are too often visible on glasses and cups, and that is against hygien rules indeed. So Mr. Pizzuti invented a gear made of whirling brushes under powerful incessant jets of water. By this means, a thoroughly cleaning will be secured.

Silvio Montanari has invented the way to ride bicycle even on raining days.

First of all he had to transform somewhat the shape of the vehicle, lowering the ~~width~~ saddle, in order to ease the riding through the air resistance. Consequently he had to shift the pedal cranks as to get the maximum efficiency.

Then a framed top against the bad weather has been realisable: when it becomes unnecessary, by an easy manoeuvre, it can be quickly removed away.
