THE QUEEN AT B.I.F.

The Olympic section of the British Industries Fair is visited by the Queen and the Duke of Edinburgh. Electrical equipment for the home, the factory, and the laboratory is a feature of this part of the fair.

The Queen sees a model of Calder Hall, Britain's first atomic power station, which she will open officially in October - as well as some up-to-the-minute domestic exhibits. One of the stands has a mechanical salesman in charge:

Mr. R.A. Butler investigates.

So he's real after all!

Or is he?

We'd better get away before he seals us something! Here's a machine we can be sure really is a machine. And one which seems to have its job nicely wrapped up. The B.I.F. is proving so successful that next years' will have a third section - a textile and clothing fair.
