FLYING BOAT.

American inventor Iger Benson doesn't see why a rowboat should stick to the water. So he takes off, just like that! All he needs is a set of rotor blades, a motor-boat to give him a tow, and Bob's your uncle! Twenty-five miles an hour is enough to get him airborne.

Cyprus Gardens, Florida, is used to water-skiers, but here is something new. They'll be needing amphibious traffic-cops if this goes on.

Iger believes any fool can invent a complicated machine, he's made this one so simple, it's as easy as flying a kite!
