ENGINEER EXHIBITION.

When engineers get together to hold an exhibition of their creations, you don't have to be a schoolboy to enjoy the result. But since it's holiday time, and dad's at work, the schoolboys get a proper look in for once. And of course, the locomotives are first priority.

Sorry, we got it wrong - it's only a model engineer exhibition. Did somebody say "only"? Take a look at this model of the Queen Elizabeth and eat those words! There's as much care, ingenuity, and skill in these jobs as there is in the real thing - and - they're mostly spare-time efforts!

Biggest exhibit is this steam-driven roundabout, which took Herbert Slack of Derbyshire nine years to make.

Seventy-year-old Sydney Harris (on the right) built this road locomotive. Other vehicles range from trains big enough to take a ride on, to scale model trams, perfect in every detail - including the street they run along.

Will passengers please fasten their safety belts?
