EXHIBITION NEWS:

London's full of exhibitions these days - everything from space ships to sausage-meat. The space ships are at the Boys' and Girls' exhibition, which has room for more familiar means of transport as well. This exhibit features self-steering model cars which can do everything real cars can do - including ignoring the Highway Code.

The Royal Navy presents a midget submarine - a real one, which sank a ship and a floating dock during the last war.

Not to be outdone, the Air Force has a Vampire advanced jet trainer on show - with pilots to demonstrate it to the customers.

And now it's mother's turn - the British Food Fair, where all the housewife's dreams come true. Here's every kind of food you can imagine, and every possible way of cooking it, freezing it, disguising it, and dishing it up.

Complete Automation may not have reached the kitchens yet, but this American layout is certainly the next best thing. You have to be careful which button you press, or who knows - you might be faced with a five-course meal when you were only looking for a box of matches. Washing up? That's no problem at all!

Do you burn your fingers, or spill the gravy, every time you open the oven? Here's the answer!

And here's a machine which can produce doughnuts even faster than Junior can eat them. Guaranteed perfect - even the hold in the middle has just the right flavour. Try this one for size, madam.

From perfect food, to the perfect home - the home of the future, on show at London's Tea Centre. It's designed by Kenneth Gopen, who explains its advantages on a scale model. The house is on stilts, with a garage, boiler room, workshop and washing-space all tucked away underneath, and the living quarters on the upper floor.

One or two full-sized rooms are on show as well - this is the lounge.

Through the hatch is the kitchen.

The house of tomorrow - but it's planned for today's problems.
