**AIR FORCE UNVEILS  
VERTICAL JET!**

Because of today's high speed planes, the Air Force has been running out of runways. But the Ryan X-13, called the Vortijet, may solve the problem and even make runways old-fashioned.

The Vortijet just goes straight up.

The plane's posture at first may be a bit strange for both pilot and spectator. But once straightened away, the jet behaves very well, as these films at Edwards Air Base show.

The X-13 lands in the way it took off.

This unusual plane goes around a lot of the time with its nose in the air, but then, it may have something to be proud about.
